UNITED STATES DEPARTMENT OF AGRICULTURE
BUREAU OF AGRICULTURAL ECONOMICS
WASHINGTON, D. C.

February 1946

MONTHLY EGG PRODUCTION, 1944-45

Egg production in the United States in 1945 was 5 percent less than the record high production in 1944, as a result of the 7 percent reduction in number of layers on hand during 1945, compared with the preceding year. The rate of egg production per layer on hand during 1945 increased about 2 percent over the 1944 rate, offsetting about a third of the reduction in numbers of layers.

Egg production in 1945 decreased in all States except Maine, Minnesota, Nebraska, North Carolina and Nevada, which showed increases ranging from 1 percent in Maine to 10 percent in Nevada. Although 1945 egg production in the country as a whole declined 5 percent from the 1944 level, the reduction in egg requirements for Lend-Lease and the armed forces in 1945 increased the supply of eggs available for civilians. Civilian consumption of eggs in 1945 was 390 per capita, compared with 351 in 1944.

These estimates of layers, rate of lay, and total egg production are a continuation of the historical series first published in May 1942, and published annually since that date.
